# Russellville Nurseries

East 96th and Burnside Streets

Portland, Oregon

Phone Tabor 0204

**PRINLEW PLUM**—A valuable new variety, produced by H. A. Lewis. A heavy and sure cropper. Plums of large size; skin yellow, overspread with bright red when fully ripe; a handsome looking plum and the rich, golden flesh is firm, but juicy; fine grained and most delicious of all, either raw or cooked. It's as good as a peach. Stands handling and shipping well. Ripe in August. If you only have room for one plum, plant a Prinlew. Select Tree.....\$1.50

**RUSSELLVILLE NURSERIES** adjoin the City Limits of Portland east of the Mt. Tabor district. Our Offices and assembly plant are at East 96th and Burnside Streets—our extensive show-grounds and nurseries are for your convenience and inspection at all times.

Our well drained fertile soil produces Nursery Stock of extra good grade—non-irrigated stock produces splendid fibrous root-systems. Satisfaction results from selections grown under our system.

You will be pleased with the results obtained from stock grown under such conditions.

**INSPECTION.** Appreciating the importance of the quick and safe arrival of all shipments to the planter, we exercise every precaution to observe plant quarantine regulatory measures and keep our stock free from insect pests and diseases, hence all plants leaving our hands carry a certificate of inspection.

**PRICES** are made to fit the quality of the stock sent out. Discriminating buyers now realize that the greatest value of nursery stock is underground. Frequent transplanting and handling specimens with adequate burlapped balls, means success and quick results. It costs more, but it is the fixed policy of the **RUSSELLVILLE NURSERIES**, and "cheap" stock will not be handled or sent out. The best is always the cheapest. Prices quoted on trees and shrubs in the Ornamental Department are for single plants. Five or more of one variety at 10% less. Prices on larger quantities upon application.

**RESPONSIBILITY.** We endeavor to send our patrons the grade and quality of stock ordered. We do not guarantee our products or assume any responsibility after they leave our nursery, as conditions always exist over which we have no control. It is understood, in case of error on our part, that we shall not be responsible for a greater amount than the price paid.

**TERMS.** Two per cent off for cash before shipment on orders amounting to ten dollars or more. To parties having satisfactory credit arrangement or account with us, one per cent ten days, thirty days net.

No claims for rejection or deficiencies will be entertained unless made within ten days after arrival of goods.

**USE THE ORDER BLANK.** For the convenience of patrons we enclose a printed form of order blank, which we ask intending purchasers to use; additional copies will be sent on request. Please follow instructions carefully in order to facilitate the safe and prompt arrival of your order.

## ROSES

"The Rose, the Queen of Flowers." The very name suggests beauty and fragrance.

There is no group of flowers so universally popular as Roses. For ornamental effects in rows or beds, or as climbing vines they are unsurpassed; and of course as cut flowers there is nothing comparable. Roses are much more effective if segregated in a group by themselves. As a rule they do not combine well with other shrubbery (this does not apply to climbers) and it is only occasionally that they are advisable or effective as single specimens. Tree or Standard roses make good specimens if well trained and carefully tended.

The abbreviations used refer to the class or group to which the rose belongs:

TEA. (T.) This group is of slender growth, not vigorous; however, there are occasional exceptions.

HYBRID TEA. (H. T.) This is the result of hybridizing the hybrid perpetual with the Teas. This group is vigorous and very free flowering, retaining much of the odor of the Tea.

HYBRID PERPETUAL. (H. P.) Hardiest of all types. Growth strong, generally upright; foliage mostly dull; flowers highly perfumed.

PERNETIANA. (Per.) A more recent introduction by Pernet Ducher, of Lyons, France. It is a cross between the Austrian Briar rose and Hybrid Perpetual; the result has produced the most brilliant color combination.

POLYANTHA. (Pol.) This group bears flowers in large clusters.

For best results with Roses we suggest that they be planted before April 1st. (Fall planting is to be preferred.) Dig the beds deep and enrich with well rotted stable fertilizer. Plant your Roses about 18 to 24 inches apart, setting the graft 3 inches below the ground level.

Water them well twice weekly during summer months adding occasional fertilizer solution (a mixture of fertilizer and water). Cultivate the plants occasionally and mulch the soil with a layer of dry straw or leaves.

In February the rose plants should be cut back quite heavily, pruning out all old wood as much as possible to force new growth and better flowers. We shall be pleased to answer any further question pertaining to your particular needs.

## CONIFERS

Conifer or Cone Bearing trees always come with Ball and Burlap. They have been transplanted several times in the nursery-row to insure fine fibrous roots and when ready for market are generally three to five or perhaps seven years old.

In these as well as in all other lines, an assortment of "*Specimen Stock*" can be quoted upon request.

Describe your place and we shall suggest the proper tree for it.

The Conifers herein quoted have been properly trained and cared for and will give absolute satisfaction.

Being so wonderfully endowed by beautiful surroundings—beautiful trees and splendid soil conditions, we of the Pacific Northwest can scarcely realize the wonderful possibilities at hand.

Why not capitalize these many advantages and co-operate with nature to advance our local conditions!!!

'Tis said that environment affects the Man—why cannot man control his environment?

Trees and Shrubs properly planted will provide your home with those intimate associations that will linger in the minds of yourself and your friends for truly it may be said "It's not a Home until it's Planted."

Every day you are Judged by the Appearance of Your Home Grounds.

It is our suggestion that you endeavor to carry out a definite plan of planting—may we consult with you, our suggestions are yours for the asking.

**BROAD LEAF EVERGREENS**

Evergreen Shrubs or Broadleaf Evergreens always come with Ball and Burlap on the roots to insure their growing. Planting instructions and arrangement suggestions are furnished with each order, upon request.

Much satisfaction can be derived from the judicious selection of Evergreens, which provide color and background for your garden throughout the year.

Consistent care and culture in the Nursery are necessary to produce good Broad Leaf Evergreen shrubs. Those herein listed are first class only.
